### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Martinez, US Pat. No. 6,594,757 B1.

2. As to claims 1, 5 and 9, Martinez teaches a system and method that permits identification of user computer systems by a server computer connected thereto to deliver service and technical support to users, comprising the steps of:

interconnecting one or more user computer systems to a server computer; loading each user computer system with a system BIOS that comprises an Internet agent, an operating system that is launched by the system BIOS and that sets up a registry, and a web browser (Martinez, col. 2, lines 7-59);

loading the server computer with web page software that permits communication with the web browsers of the user computer system; turning on a user computer system; launching the BIOS; launching the Internet agent; adding a predetermined number of Multipurpose Internet Mail Extension (MIME) headers to the registry that identify the user computer system (Martinez, col. 2, lines 7-59);

Art Unit: 2141

changing a default web page of the web browser to point to a web page on the server computer; launching the web browser; connecting to the web page on the server computer (Martinez, col. 2, lines 7-59);

transferring the MIME headers in a Hyper Text Transfer Protocol (HTTP) request to the server computer; analyzing the HTTP request at the central server to determine if the MIME headers were transferred; and if the MIME headers are identified, pushing service content from the server computer to the user computer (Martinez, col. 2, lines 7-59).

3. As to claims 2, 7 and 11, Martinez teaches the system and method, wherein the step of interconnecting one or more user computers to the server computer comprises interconnecting the one or more user computers to the server computer by way of the Internet (Martinez, col. 2, lines 7-59).

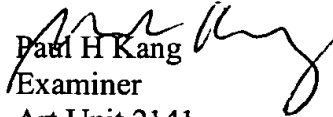

4. Claims 3, 4, 6, 8, 10 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
